VIDEOINSIGHT®

A Panasonic Company

Protect Your Assets and Minimise Risks with the Complete Surveillance Solution

Video Insight is the latest in surveillance technology integrating powerful enterprise VMS features, hardware optimisation and cost efficiency in one robust system.

Harnessing the capabilities of pure 64-bit VMS, Video Insight optimises your hardware to allow endless scalability, unlimited client workstations, simple integration with legacy systems, centralised administration, standby server and more.

With current deployment in law enforcement, commercial, education, healthcare and transportation industries, Video Insight continues to provide you optimal solutions to meet your security demands.

Panasonic Video Insight meets your demand for an advanced Video Management System with a powerful complete configuration of enterprise-level reliability, unlimited scalability, hardware optimisation and cost-efficiency as an easy-to-use surveillance solution.

Advanced surveillance features eliminate uncertainty and improves response times. Every feature provides direct user benefits to your surveillance operations.

MAXIMISING BENEFITS FOR THE USER

Easy Integration With Your Hardware

Video Insight is engineered on an open architecture, providing support for over 3000 camera models from over 130 camera manufacturers.

An open platform not only provides easy integration with your surveillance workflow, but also encourages a hassle-free migration without extensive training and instruction.

Easy Operation with User-friendly Interface

Designed as a multi-viewer platform, the Video Insight grants users the ability to monitor cameras remotely on various operating systems including platforms such as, Windows, Mac, Web browsers, iOS and Android.

The integrated user-friendly graphics user interface makes it easy for users to operate intuitively and efficiently.

ENHANCED HARDWARE & SOFTWARE CAPABILITY

Advanced Bundled VMS Features

Video Insight features a single-management interface which comes pre-installed with a wide array of features at no additional costs. Enhanced surveillance features include the Video Wall, Health Monitor, Automated Failover, Active Directory LDAP, Access Control Integration and Software Development Kit (SDK).

The advanced Guard Tour feature ensures operators perform scheduled security checks at stipulated times and the Rules function provides automated functions to reduce operators' workload.

Optimised Hardware Allows Unlimited Scalability

Engineered as a pure 64-bit system, Video Insight maximises hardware capability resulting in increased efficiency across all system features.

A key factor in hardware optimisation is Video Insight's powerful capability to allow users up to 300 cameras per server with an unlimited number of web clients and storage size.

This potentially provides users with unlimited scaling possibilities in the surveillance workflow.

OPTIMISATION & COST EFFICIENCY

Surveillance is not cable TV, why pay for every channel you watch?

Video Management
Software (VMS)
Competitor

Lower cost than any other VMS

With the high cost commonly associated with VMS systems, Panasonic Video Insight seeks to eliminate unnecessary costs by introducing bundled VMS features and iPro camera licenses in one complete system.

You can now access a full range of surveillance technology at no hidden costs*.

Video Insight with
Panasonic iPro

* Third party accessories such as the License Plate Recognition (LPR) are not included.

SURVEILLANCE TECHNOLOGY NEVER STOPS ADVANCING

Panasonic Video Insight is a robust enterprise-class surveillance system built with the principles of efficiency and simplicity of operation in mind.

With a strong commitment to the security industry, Video Insight brings together powerful surveillance technology, advanced features, unmatched flexibility, easy-to-use interface and a low total cost of ownership all in one single bundled system.

Be ready for the future of surveillance.

** Third party accessories such as the License Plate Recognition (LPR) are not included.*

IP SERVER

- ▶ Efficient 64-bit design supports up to 300 cameras/server (depending on recording condition)
- ▶ Designed for large camera deployments – multi-server, multi-location
- ▶ Open platform allows easy integration
- ▶ SQL Server based
- ▶ Supports camera- and server-side motion detection
- ▶ Automated Failover
- ▶ Integrates with Active Directory users and groups
- ▶ Support for local, direct attached, SAN / NAS
